

# Transpose

---

## Introduction

Transpose means to change something from one position to another, or to exchange the positions of two things.

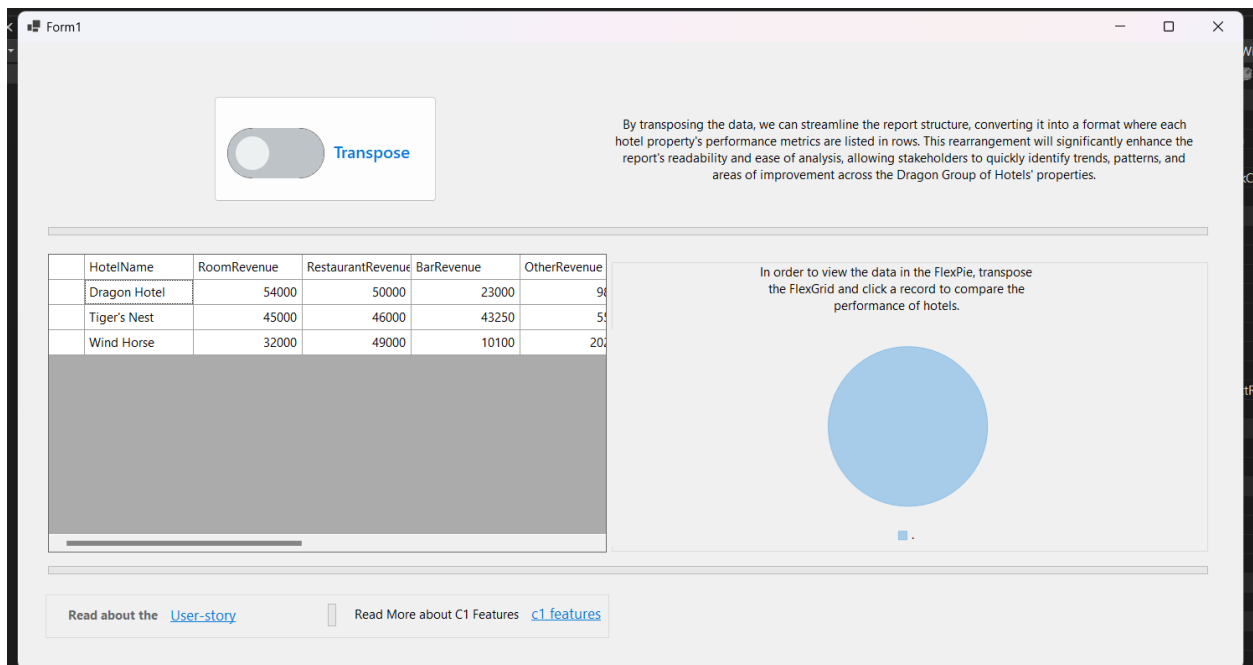

## Display Flexgrid

Context menus can be helpful to user as they provide shortcuts for actions that are frequently used. In FlexGrid, there can be two scenarios to display a context menu.

- Display flexgrid in non-edit mode
- Display flexgrid menu in edit mode

### Display Flexgrid in Non-edit Mode

To display transpose changes when grid is in non-edit mode, you need to click on transpose button.

## Display Flexgrid in Edit Mode

To display previous non-edit mode, you need to click on the transpose button again. When you click on the data in transpose data the data on the pie chart will also change with to click done the row in flexgrid.

Form1

Transpose

By transposing the data, we can streamline the report structure, converting it into a format where each hotel property's performance metrics are listed in rows. This rearrangement will significantly enhance the report's readability and ease of analysis, allowing stakeholders to quickly identify trends, patterns, and areas of improvement across the Dragon Group of Hotels' properties.

HotelName	Dragon Hotel	Tiger's Nest	Wind Horse
RoomRevenue	54000	45000	32000
RestaurantRevenue	50000	46000	49000
BarRevenue	23000	43250	10100
OtherRevenue	9800	5500	20200
GrossRevenue	136000	139750	111300
PAT	75600	71388	36900
Expense	52000	60430	70200
TotalGuests	821	750	668
TotalStaff	20	23	30
NumberRooms	21	19	15
